ADITYA WAGH

Pune, Maharashtra, India
Phone: +91-9021645439 **Email:** aditya.wagh0211@gmail.com
LinkedIn GitHub LeetCode

PROFESSIONAL SUMMARY

Aspiring Software Enginnering with strong experience in Java, SQL, and backend system development. Skilled in building data-driven applications, optimizing database queries, and debugging complex issues using Root Cause Analysis (RCA). Completed 100+ DSA problems on LeetCode, demonstrating strong problem-solving and coding ability. Seeking entry-level backend or software engineering roles.

EDUCATION

Bachelor of Technology in Computer Science (Cyber Security) 2022 – 2026
G.H. Raisoni College of Engineering and Management, Pune **CGPA: 8.43 / 10**

Higher Secondary Certificate (HSC) — State Board of Maharashtra **61.50%**
Secondary School Certificate (SSC) — State Board of Maharashtra **80.80%**

TECHNICAL SKILLS

Languages: Java, Python, SQL (Joins, Queries)
Backend: JDBC, REST API Fundamentals, Object-Oriented Programming (OOP)
Databases: MySQL, Query Optimization, Indexing, Normalization
Tools: Git, GitHub, Linux, Postman, VS Code, Eclipse
Core CS: Data Structures and Algorithms, Operating Systems, Computer Networks, SDLC

PROFESSIONAL EXPERIENCE

Associate Software Engineer Intern Nov 2025 – Apr 2026
Thynk Technology India, Pune

- Enhanced SQL queries and database schema, improving execution performance by approximately 20%
- Analyzed backend modules to identify and resolve data and performance bottlenecks
- Performed Root Cause Analysis (RCA) to debug application and database issues
- Used Linux tools for log analysis and debugging production-level issues
- Collaborated using Git for version control and participated in debugging and testing cycles
- Supported SDLC activities including data validation, testing, and backend performance tuning

PROJECTS

Smart Attendance System (Face + QR Based) GitHub

- Developed backend system using Python and MySQL for automated attendance tracking
- Implemented validation logic to ensure accurate and consistent data storage
- Optimized database queries to improve system response time

Hotel Management System (Java Backend Application) GitHub

- Built backend application using Java and JDBC for managing bookings and customer data
- Applied normalization and indexing techniques to improve database efficiency
- Improved performance through debugging and optimized query handling

Smart Surveillance System (YOLO + OpenCV) GitHub

- Engineered object detection system and stored structured data in a relational database
- Designed backend logic for efficient data handling and retrieval
- Reduced latency through optimization and debugging of processing pipeline

CERTIFICATIONS & ACHIEVEMENTS

Problem Solving: Solved 100+ problems on LeetCode
SAP Certifications: Deepening ABAP Programming Knowledge, Basic ABAP Programming
IBM Certification: Web Development Fundamentals
